

By now I hope you agree that we here at Sand Creek take great pride in breeding and raising quality British Labs. We strive to have our puppies stay true to the British line by maintaining

a manageable sized dog with intelligence, a mild temperament and natural hunting instincts. We have stayed true to the British standard by taking great consideration in each and every breeding to obtain our goal.

Each of our dogs have been tested clear from multiple genetic disease. Prior to breeding our dogs typically have their OFA hip certification done and are only breed if they obtain either a “good” or “excellent” rating. With the precautions we take in our breeding program we feel confident in offering a Health Guarantee.

### **Health Guarantee**

This puppy may be returned before 12 month of age if its’ eyes cannot be CERF certified because of Retinal Dysplasia or Retinal Atrophy. He or she may also be returned before 30 months of age if its’ hips cannot be OFA certified because of Hip Dysplasia. To obtain this guarantee the dogs must be vet checked, at the owners' expense, with our vet or have papers provided to our vet to confirm negative results. If a negative result is confirmed we will exchange the dog with a comparable dog or puppy as soon as possible. If impairment is not severe and you would prefer to keep the dog we will offer another puppy at half price when the time comes. This guarantee will be voided if dog was ever bred or used for breeding. This guarantee is non-transferable.
